

SYSTEMATIC MAINTENANCE

PLANNED VALUE RETENTION OF YOUR MACHINE

- Better machine availability
- Higher productivity
- Better retention of the machine's value
- Less machine downtime
- Lower costs through early prevention
- Greater predictability of necessary service work
- Detailed information on the actual condition of the machine, also as a basis for certification

The logo for Studer, featuring a stylized white 'S' icon to the left of the word 'STUDER' in a bold, white, sans-serif font.

With a STUDER cylindrical grinding machine, you have a product of the highest quality. It requires regular inspections and maintenance to ensure that your cylindrical grinding machine works trouble-free for a long time and delivers high-precision grinding results. Take advantage of our preventive service, "Systematic Maintenance".

With the maintenance agreement, you define the required maintenance interval. Our Preventive Maintenance team will initiate the next steps.

We at STUDER take care of the planning and scheduling and contact the departments responsible at your company several months before the planned maintenance. Once the appointment has been confirmed, the maintenance material is prepared and dispatched to your premises in good time. The material includes spare and wear parts as well as lubricants and oil.

We arrange that the necessary materials and maintenance technicians arrive at your premises on time to ensure that everything runs smoothly. You don't have to worry about a thing. We guarantee professional handling from start to finish.

Professionally trained STUDER maintenance technicians use checklists to inspect all components and assemblies, carry out the maintenance, and check the machine geometry. During the final meeting with our technicians, you will receive an overview of the actual condition of the machine and can decide how to proceed.

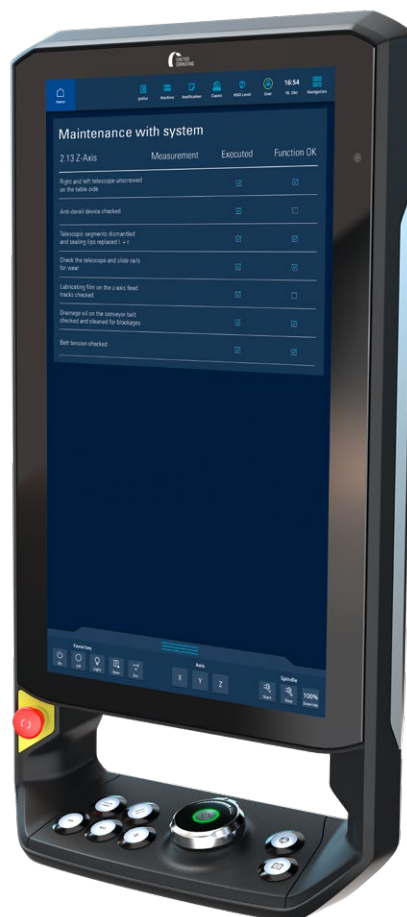

Due to the efficient and regular planning and structured execution by STUDER maintenance technicians, the costs of this service are far lower than occasional individual maintenance.

Our services

- Maintenance according to checklist with over 280 checkpoints
- Replacement of numerous original wear parts
- Machine geometry check
- Detailed information on the actual condition of the machine
- Expert recommendation on necessary prevention
- Specialized employees with professional training

Your benefit

- Higher productivity through better machine availability
- Reduction of your administrative costs
- Adherence to optimum maintenance intervals

Please contact us if you have any questions about our overhaul and repair services or for a non-binding offer.
