CUSTOMER PORTAL

ONE PLATFORM. ALL MACHINES. STRONG RESULTS.

- Faster, direct access to STUDER support
- Find parts and streamline service digitally
- Manage all machines in a single portal
- Create full transparency for teams and processes
- Organize machines flexibly based on your own structures

STUDER

The Art of Grinding.

A member of UNITED MACHINING SOLUTIONS

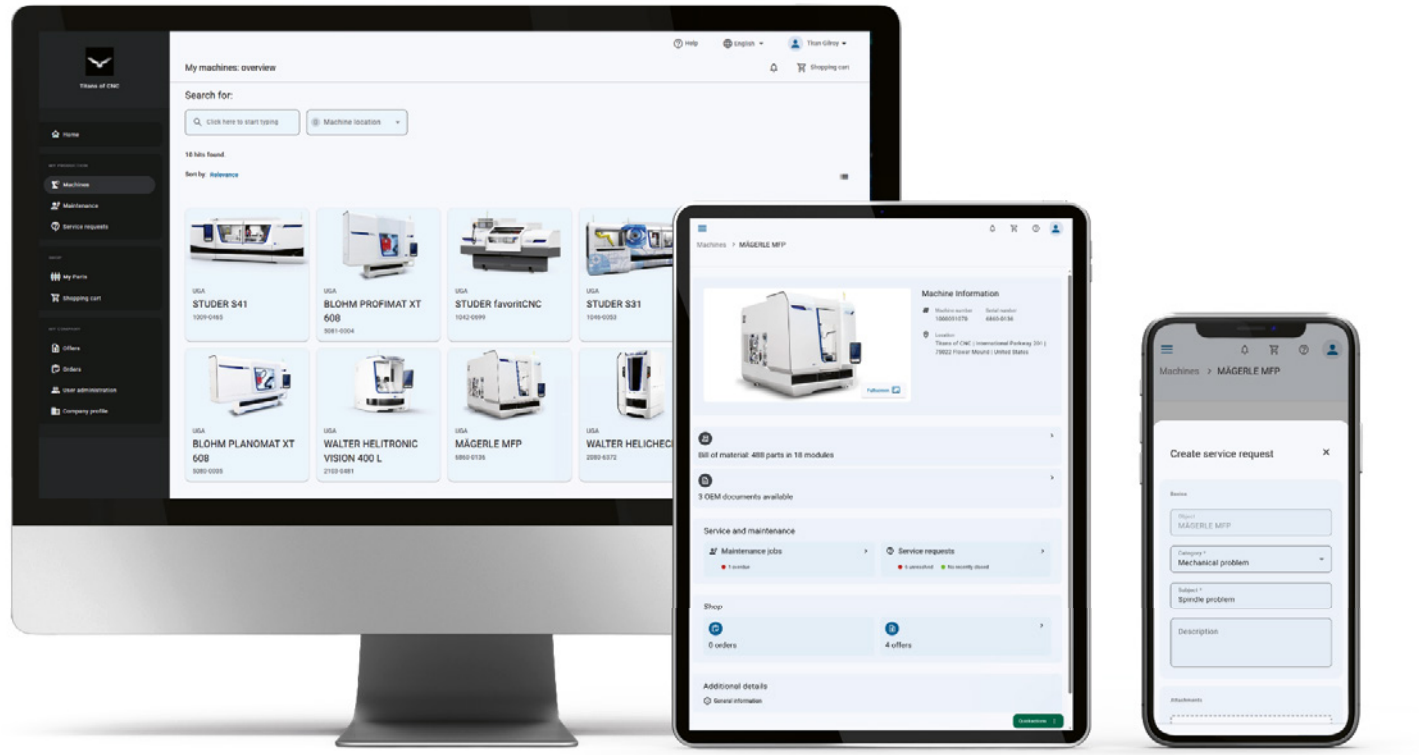

Mixed machine fleets often mean multiple portals, different user interfaces, and scattered information. This results in switching between systems, extra work, and a high need for coordination. Our Customer Portal, based on the Transaction-Network platform, provides a solution by bringing all relevant information together in one central location.

It enables you to quickly and easily contact our STUDER Customer Care Team and provides you with a unified platform to manage your machine fleet, order spare parts, create service requests, and maintain an overview of your production at all times.

Your Benefits

- One portal for your entire machine park: Manage machines from a wide variety of OEMs in a single, easy-to-navigate system.
- Direct access to STUDER Customer Care: Contact us, provide feedback, and get support quickly, easily, and without any red tape.
- Efficient spare parts and service processes: Find the right parts immediately, easily reorder wear parts, and create digital service requests in just a few seconds—including real-time tracking.
- Transparency for all teams: machine data, performance metrics, order history, and maintenance documentation are available to your entire team at all times—with no information gaps.
- Customizable: Name, structure, and tag machines according to your own specifications. Add images, create your own assets, and design your portal exactly according to your production logic.

Become part of the digital ecosystem. With our Customer Portal, you create a central hub for transparency, efficiency, and seamless processes in your production environment.
